

Real Estate Customer Document Workflow & Transaction Management System

Final Functional & Technical Specification for AI Coding Agent

Version 1.2

1. PROJECT OBJECTIVE

Build a production-grade, web-based, mobile-responsive workflow management system for a real estate developer.

The current process is controlled through physical paper forms that travel between CRM, CSO, Management, Legal, CFO, Admin and other personnel.

The new system must digitise the **control and tracking layer** while allowing the physical legal documents to continue being printed, physically signed, legally verified and registered with the SRO.

The system must become the central source of truth for:

- Unit allocation
- ATS workflow
- Sale Deed workflow
- Direct Sale Deed cases
- Customer/unit changes
- Cancellation
- Financial receipt verification
- Physical document custody
- Document scanning
- Sales close
- Customer handover
- Pending tasks
- Approvals
- Send-backs
- Exceptions
- Audit trail

The system should answer at any point:

Which project?
Which unit?
Which customer?
Which document?
What stage is it at?
Who is responsible?
Who actually performed the last action?

Who physically has the document?
How long has it been pending?
What is pending?
What financial amounts remain unconfirmed?
What happened previously?
What happens next?

2. CORE DESIGN PRINCIPLE

Do NOT build a digital copy of the paper form.

Build:

Transaction + Unit + Workflow + Task + Document + Financial Control + Physical Custody + Exception Management + Audit Trail

The workflow engine must be the core of the application.

3. APPLICATION

The system must be:

- Web-based.
 - Mobile responsive.
 - Desktop optimized.
 - Usable on mobile for approvals and monitoring.
 - Role-based.
 - Database driven.
 - Workflow/state-machine based.
 - Integrated with Google Drive.
 - Integrated with email notifications.
 - Equipped with in-app notifications.
 - Equipped with scheduled daily reports.
 - Equipped with immutable audit logging.
-

4. USER ROLES

Initial roles:

1. Super Admin
2. CRM
3. CRM Executive
4. CSO — Chief Sales Officer
5. Management

6. Legal Executive
7. Legal Manager
8. CFO
9. Admin Executive

The system must NOT hard-code the number of users per role.

Super Admin can create additional users.

The current organisation may have:

- 2 CRM users
- 1 CRM Executive
- 1 CSO
- 1 Management user
- 1 Legal Executive
- 1 Legal Manager
- 1 CFO
- 1 Admin Executive

5. ROLE VS ACTUAL USER

The application must use **role titles**, not hard-coded employee names.

For example, the workflow will say:

Legal Manager Approval

not:

Pranav Approval

The logged-in user performing the action will automatically be captured.

Example:

Workflow Role: Legal Manager
Actual User: [Logged-in Legal Manager Name]
Action: Approved
Date/Time: [system timestamp]

This makes the application reusable if employees change.

6. SUPER ADMIN

Super Admin can:

- Create/edit projects.
- Activate/deactivate projects.
- Create/edit units.
- Bulk import units.
- Create/edit users.
- Activate/deactivate users.
- Assign roles.
- Configure masters.
- Configure permissions.
- View all workflows.
- View all documents.
- View all audit trails.
- Configure permitted exceptions.
- Manage workflow configuration.
- Manage Google Drive configuration.
- Manage notification settings.
- Change locked financial amounts.
- Reopen completed workflows.
- Manage delegation.
- Export reports/data.

Audit records cannot be deleted.

7. PROJECT MASTER

Fields:

- Project Name
- Project Code
- RERA Number
- Project Status
- Project Start Date
- BU/Completion Date
- Direct Sale Deed Applicable
- Active/Inactive

Project must be selected from a dropdown.

8. UNIT MASTER

Each unit belongs to a Project.

Fields may include:

- Project
- Unit Number
- Unit Type
- Area
- Other project-specific master information

Unit number must be selected from Unit Master.

Only units belonging to selected project should appear.

9. AUTOMATIC UNIT STATUS

Users do not manually set unit status.

Status is determined by workflow.

Possible statuses include:

- Available
- Allocation Pending
- Allocation Approved
- ATS in Process
- ATS Registered
- Sale Deed in Process
- Sale Deed Registered
- Financial Exception
- Completed
- Cancelled
- Unit Changed
- Superseded

Exact status is generated by system rules.

10. SOURCE / BOOKING MASTER

Create a configurable master for booking sources.

Examples:

- Direct
- Channel Partner
- Agent
- Employee Reference
- Existing Customer
- Other

Super Admin can:

- Add source
- Edit source
- Activate/deactivate source

Do NOT allow free-text entry where a master value is appropriate.

11. BOOKED BY MASTER

`Booked By` is a mandatory field.

The person may be:

- Employee
- Agent
- Channel Partner
- Other approved booking source person

Do NOT make this free text.

Create a configurable `Booked By Master`.

Each record may contain:

- Name
- Type
- Employee/Agent/Channel Partner classification
- Active/Inactive

This prevents spelling variations and inconsistent reporting.

Example:

Do not allow:

- Rajesh Kaurani
- Rajesh Kourani
- Rajesh Kaurani.
- RAJESH KAURANI

as separate records.

They should all resolve to one master entity.

12. BOOKING INFORMATION

Initial allocation must capture:

- Source of Booking
 - Booked By
 - Reference/Booking Remark
 - Client Confirmation Date
 - Onboarding Date
 - Project
 - Unit Number
 - Client Name
 - Sale Deed Value
 - Payment Plan
-

13. PAYMENT PLAN MASTER

Payment Plan must be a controlled dropdown.

Create a configurable Payment Plan Master.

Examples:

- Construction Linked Plan (CLP)
- Down Payment Plan
- Time Linked Plan
- Custom Plan

Super Admin can add/edit/deactivate payment plans.

If required, a remark can explain special/custom arrangements.

14. REFERENCE / BOOKING REMARK

The current manual form has:

Reference By

This is NOT the same as Source of Booking .

Example:

The source may be:

Agent

while CRM may record:

Confirmation received through [specific agent/reference person]

Therefore provide:

Booking / Reference Remark

as a free-text field.

This is specifically intended for such operational notes.

15. MULTIPLE UNITS PER CUSTOMER

A customer may have multiple units.

Each unit must have a separate transaction/workflow record.

Example:

Customer X:

- A-101 → Transaction 001
- A-102 → Transaction 002

Each unit has its own:

- Allocation
 - ATS
 - Sale Deed
 - Financial verification
 - Documents
 - Audit trail
 - Handover
-

16. CUSTOMER MASTER INFORMATION

Do not duplicate the full customer information maintained in the existing CRM.

Do not require:

- Mobile
- Email
- PAN
- Full address
- Detailed customer master

- Detailed co-owner master

unless required in a future workflow.

Customer Name remains available for transaction identification.

17. INITIAL UNIT ALLOCATION FORM

Fields:

Booking

- Client Confirmation Date
- Onboarding Date
- Source of Booking
- Booked By
- Booking/Reference Remark
- Payment Plan

Transaction

- Project
- Unit Number
- Client Name
- Sale Deed Value

Mandatory Controls

- Client Confirmation Form — Upload
- Customer KYC Captured — Checkbox

KYC document itself is NOT uploaded.

18. FINANCIAL DETAILS AT ALLOCATION

CRM must enter:

- Basic Amount
- GST Amount
- Running Maintenance
- Maintenance Deposit
- Stamp Duty
- Legal Fees
- PNG Gas Connection Charges
- TDS Amount

These values form the initial financial baseline.

19. FINANCIAL AMOUNT LOCK

After allocation approval, the financial values are locked.

No normal user can change them.

Only Super Admin can modify them.

20. SUPER ADMIN FINANCIAL CHANGE

If Super Admin changes any locked amount:

System must record:

- Field
- Old value
- New value
- Difference
- Reason
- User
- Date/time

Immediately notify:

- CFO
- Management

The notification must identify the changed transaction and values.

21. INITIAL ALLOCATION VALIDATION

CRM cannot submit for CSO approval unless:

- Client Confirmation Form uploaded.
- KYC Captured checkbox ticked.

The validation must be enforced on the server/backend as well as frontend.

22. THREE SEPARATE MANAGEMENT APPROVALS

The system must treat the following as three separate approvals:

1. Unit Allocation Management Approval

Approval of the initial unit allocation.

2. ATS Management Approval

Separate approval before ATS execution.

3. Sale Deed Management Approval

Separate approval before Sale Deed execution.

One approval must NOT automatically satisfy another.

23. INITIAL UNIT ALLOCATION WORKFLOW

CRM → CSO → Management

CRM

Submit allocation.

CSO

Approve / Send Back.

Management

Approve / Send Back.

No Reject option anywhere.

24. CSO SEND BACK

Send Back requires mandatory remark.

Workflow returns to CRM.

CRM corrects.

CRM resubmits.

Full history remains.

25. MANAGEMENT SEND BACK

Same principle.

Management Send Back:

- Mandatory remark.
 - Returns to appropriate previous stage.
 - Correction.
 - Resubmission.
 - Full audit trail.
-

26. DIRECT SALE DEED

CRM must have:

Direct Sale Deed Case

checkbox.

This is intended particularly for projects where BU has been received and ATS is no longer required.

If selected:

- ATS workflow is skipped.
- Mandatory Direct Sale Deed remark.
- Audit event generated.
- Sale Deed workflow becomes next stage.

Timeline must show:

ATS Skipped – Direct Sale Deed Case

ATS must never appear as pending.

27. NORMAL WORKFLOW

Normal case:

Allocation

→ CSO Approval

→ Management Allocation Approval

→ ATS Management Approval

→ ATS

→ Sale Deed Management Approval

→ Sale Deed

28. DIRECT SALE DEED WORKFLOW

Direct case:

Allocation

→ CSO Approval

→ Management Allocation Approval

→ Sale Deed Management Approval

→ Sale Deed

29. ATS MANAGEMENT APPROVAL

CRM requests:

ATS Execution Approval

Management can:

- Approve
- Send Back

Send Back requires remark.

30. CUSTOMER ATS DRAFT APPROVAL

CRM sends ATS draft through normal email.

Customer reviews.

Customer provides approval by email.

CRM:

- Saves customer approval email as PDF.
- Uploads PDF.
- Completes customer approval checkpoint.

The application does not require direct email integration for this stage.

31. LEGAL EXECUTIVE — ATS PRINT & GARVI

Legal Executive is responsible for:

- Printing ATS.
- Completing Garvi process.
- Obtaining Garvi reference number.
- Entering Garvi reference number.
- Confirming completion.
- Adding remark.
- Sending to Legal Manager.

If Legal Executive is unavailable, the permitted substitute/acting-role mechanism applies.

No Garvi form upload.

No Garvi date required.

32. LEGAL MANAGER — ATS VERIFICATION

Legal Manager checks:

- Printed ATS.
- Garvi information.
- Garvi reference number on Garvi website.
- Required documentation.

Can:

- Approve
- Send Back

No Reject.

33. CFO — ATS LEDGER CHECK

CFO performs the financial/ledger check.

Field:

Ledger Verified

Checkbox:

- Yes

CFO may add remark.

CFO can Complete or Send Back.

CFO does not alter allocation financial amounts.

34. PHYSICAL DOCUMENT MOVEMENT

Every important physical movement should be recorded separately from workflow responsibility.

Example:

Legal Executive → CRM

System records:

- From
 - To
 - Document
 - Date/time
 - User
 - Remark
-

35. PHYSICAL DOCUMENT CUSTODY

Every workflow should display:

Physical Document Currently With

Examples:

- CRM
- Legal Executive
- Legal Manager
- CFO
- Admin
- Customer

This is separate from:

Workflow Currently Pending With

Example:

Workflow: Pending with Legal Manager

Physical Document: With CRM

36. CUSTOMER ATS SIGNATURE

CRM receives physical ATS.

CRM obtains customer signature.

CRM completes the digital checkpoint.

Physical document moves to Legal Manager for final verification.

37. LEGAL FINAL ATS VERIFICATION

Legal Manager performs final verification.

Can:

- Approve
- Send Back

Actual performer is captured through login.

38. ATS REGISTRATION

After final verification:

ATS is registered with SRO.

Legal Executive/CRM Executive as configured enters:

- SRO
- Registration/Document Number
- Registration Date
- Execution Date where relevant
- Other registration reference

No mandatory registration-document upload.

The registered document is subsequently scanned.

39. ADMIN — ATS SCAN

Admin Executive:

- Scans registered ATS.
 - Saves to Google Drive.
 - Confirms scan.
 - Confirms photocopy given to Accounts.
 - Adds remark.
-

40. SALES CLOSE CONFIRMATION

The current paper specifically includes:

Document Scan & Given to A/c for Sales Close

Therefore create a separate:

Sales Close Confirmation

field/checkpoint.

Admin Executive must confirm:

- Document scan completed.
- Copy/document given to Accounts.
- Sales Close Confirmation.

Record:

- User
 - Date/time
 - Remark
-

41. CRM EXECUTIVE — SCAN CHECK

CRM Executive performs final scan check.

Checks:

- Correct document
- Complete document
- Readable
- Correct unit
- Correct customer
- Correct Google Drive folder
- Correct naming/location

Then marks:

Scan Verified

42. CUSTOMER HANDOVER

CRM Executive enters:

- Document handover date
- Customer receiving copy upload

Customer receiving copy is mandatory for final document closure.

43. SALE DEED MANAGEMENT APPROVAL

Before Sale Deed execution:

CRM requests:

Sale Deed Execution Approval

Management:

- Approves
- Sends Back

This is a separate approval from both:

- Unit Allocation Management Approval
- ATS Management Approval

For Direct Sale Deed cases, this is still mandatory.

44. SALE DEED LEGAL WORKFLOW

After Sale Deed Management Approval:

Legal Executive:

- Prepares/prints document as required.
- Completes relevant Garvi process.
- Enters reference.
- Submits to Legal Manager.

Legal Manager:

- Verifies.
- Approves/Send Back.

CFO:

- Performs financial verification.

CRM:

- Obtains customer signature.

Legal Manager:

- Performs final verification.

Then:

SRO registration.

45. SALE DEED FINANCIAL COMPONENTS

At allocation CRM enters:

- Basic Amount
- GST Amount
- Running Maintenance
- Maintenance Deposit
- Stamp Duty
- Legal Fees
- PNG Gas Connection Charges
- TDS

Amounts are locked after allocation.

46. CFO RECEIPT CHECK

CFO sees each amount individually.

For each:

Received – Yes/No

Components:

1. Basic Amount
2. GST Amount
3. Running Maintenance
4. Maintenance Deposit
5. Stamp Duty
6. Legal Fees
7. PNG Gas Connection Charges
8. TDS

CFO cannot change the amount.

47. LOAN CHEQUE

Fields:

- Loan Cheque Available
- Date
- Bank Name
- Cheque/Document Number
- Amount
- Loan Cheque Photo — Optional
- Remark

Loan cheque photo is not mandatory.

48. CFO APPROVAL WITH PENDING AMOUNTS

CFO may approve even when one or more receipts are pending.

Workflow continues.

The system creates a separate:

Financial Exception

for every pending component.

49. FINANCIAL EXCEPTION

Example:

Component	Amount	Receipt
Basic	₹44,00,000	✓
GST	₹44,000	✓
Running Maintenance	₹50,000	✓
Maintenance Deposit	₹50,000	✗
Stamp Duty	₹2,15,500	✓
Legal Fees	₹15,000	✓
PNG	₹10,000	✗
TDS	N/A	—

Sale Deed can still proceed.

Status:

CFO Approved – 2 Financial Items Pending

50. FINANCIAL EXCEPTION AFTER SALE DEED

Financial exception exists independently of document workflow.

Therefore:

Sale Deed: Completed

Document Handover: Completed

Financial Compliance: Pending

Overall Transaction: Attention Required

When CFO later confirms all receipts:

Financial Compliance: Complete

Then:

Overall Transaction: Closed

51. FINANCIAL ALERTS

If CFO approves with pending amounts:

Immediately notify:

- CFO
- Management
- CRM

List exact pending components.

52. POST-SCAN FINANCIAL ALERT

After Admin completes Sale Deed scanning:

System checks pending financial receipts.

If any remain:

Notify:

- CFO
- Management
- CRM

Message must state:

Sale Deed executed/registered and scanned, but the following financial receipts remain unconfirmed.

53. INDEX II / CERTIFIED COPY

After Sale Deed registration, Legal Executive confirms:

- Index II Downloaded
- Certified Copy Downloaded

No document upload required.

54. MANAGEMENT PERMISSION TO SKIP

Provide:

Management Permission Available to Skip Download

If used:

- Management user captured.
- Date/time captured.
- Mandatory remark.
- Audit trail.

Only specifically configured requirements may be bypassed.

No generic "Skip Any Step" function.

55. SALE DEED SRO INFORMATION

Capture:

- SRO
- Registration/Document Number
- Registration Date
- Execution Date
- Other relevant reference numbers

No mandatory SRO document upload.

56. ADMIN — SALE DEED SCAN

Admin:

- Scans registered Sale Deed.
 - Saves to Google Drive.
 - Confirms scan.
 - Confirms Accounts copy.
 - Confirms Sales Close.
 - Adds remark.
-

57. CRM EXECUTIVE — FINAL SALE DEED CHECK

CRM Executive verifies scan.

Then enters:

- Scan Verified
- Customer Handover Date
- Customer Receiving Copy

Customer receiving copy mandatory for final closure.

58. CANCELLATION WORKFLOW

Cancellation must be a controlled workflow.

Do not delete the transaction.

Capture:

- Cancellation request date
- Project
- Unit
- Customer
- Reason
- Supporting document where applicable
- Financial implications
- Remarks

Approval sequence should be configurable and include Management and CFO where financial/refund implications exist.

After approval:

- Transaction becomes Cancelled.
 - Unit status updates automatically.
 - Complete original history remains.
 - Documents remain.
 - Audit remains.
-

59. UNIT CHANGE WORKFLOW

CRM cannot simply change the unit number after allocation.

Create:

Unit Change Request

Capture:

- Old Unit
- New Unit
- Reason
- Date
- Financial impact
- Existing workflow stage
- Approvals
- Remarks

Old transaction history remains.

New unit relationship is created through controlled workflow.

60. CUSTOMER CHANGE WORKFLOW

Customer/ownership changes must not overwrite the historical customer record.

Create:

Customer Change Request

Capture:

- Existing customer
- Proposed customer
- Reason
- Date
- Supporting documents
- Approval
- Remarks

Original information remains permanently visible in history.

61. COMPLETED WORKFLOW REOPEN

Only Super Admin can reopen completed workflows.

Reopen requires:

- Reason
- Super Admin
- Date/time

Audit event:

Workflow Reopened

No historical information is deleted.

62. DELEGATION

Support formal delegation.

Delegation records:

- Original user
 - Acting user
 - Nominal role
 - Delegated role
 - Start date
 - End date
 - Reason
-

63. LEGAL EXECUTIVE DELEGATION

Legal Executive can delegate to:

- CRM
 - Legal Manager
-

64. LEGAL MANAGER DELEGATION

Legal Manager can delegate to:

- CRM
 - CFO
-

65. CFO DELEGATION

CFO can delegate to:

- Management
-

66. CRM/CFO LEGAL MANAGER FUNCTION

Because Legal Manager is part-time:

CRM or CFO may perform Legal Manager functions even without formal delegation.

This is a permitted business rule.

Audit must show:

Nominal Workflow Role: Legal Manager

Actual Performer: CRM/CFO

Actual User: Logged-in user's name

Date/time

Action

Remark

67. MIXED LEGAL VERIFICATION

System must support:

First verification:

Legal Manager

Second verification:

CRM

OR:

First:

CRM

Second:

Legal Manager

OR:

First:

Legal Manager

Second:

CFO

Each action remains separately recorded.

68. FORMAL REMARK VS INTERNAL COMMENT

Formal Remark

Part of official workflow.

Required for:

- Send Back
- Exception
- Reopen
- Super Admin financial change
- Direct Sale Deed
- Management override
- Cancellation
- Unit Change
- Customer Change

Internal Comment

Used for operational communication.

Example:

@CRM Please confirm the document wording.

Internal comments do not move workflow.

69. @MENTION

Users can mention another user.

Mentioned user receives:

- In-app notification
- Email

70. NO REJECT

There is no Reject action anywhere in the standard workflow.

Every correction happens through:

[Send Back](#)

with mandatory reason.

71. AUDIT TRAIL

Every significant event must be permanently recorded.

Capture:

- User
- Actual role
- Nominal workflow role
- Date/time
- Action
- Previous stage
- New stage
- Remark
- IP
- Device/browser
- Old/new values where applicable
- Document/version involved

Audit trail cannot be edited/deleted.

72. PHYSICAL CUSTODY AUDIT

Whenever physical document changes hands:

Record:

- Document
- From
- To
- Date/time
- User
- Remark

This allows management to determine:

Physical Document Currently With

73. DOCUMENT STORAGE

Integrate with Google Drive.

Recommended:

Project

→ Unit

→ Transaction

→ ATS

or

→ Sale Deed

Store Google Drive file ID/reference in database.

74. DOCUMENT VERSIONING

Never silently overwrite uploaded documents.

If replaced:

- Version number
- Old version
- New version
- User
- Date/time
- Reason

Old versions remain available.

75. DOCUMENTS TO STORE

Store:

- Client Confirmation Form
- Customer ATS approval email PDF

- Customer receiving copy
- Optional loan cheque photo
- Other configured supporting documents
- Registered ATS scan
- Registered Sale Deed scan

Do NOT require:

- Garvi form upload
 - Index II upload
 - Certified Copy upload
 - Other documents that are already scanned/stored through the normal process unless later configured.
-

76. DAILY PENDENCY

Every morning at 10:00 AM:

Individual users

Receive their own pending tasks.

CFO

Receives comprehensive pendency.

CSO

Receives comprehensive pendency.

Management

Receives comprehensive pendency.

The comprehensive report should cover all projects.

77. PENDENCY REPORT

Columns:

- Project
- Unit
- Customer
- Document
- Current Stage
- Responsible Person
- Physical Document Holder

- Date Entered Stage
 - Days Pending
 - Last Action
 - Pending Financial Items
 - Direct Sale Deed
 - Send Back Status
 - Latest Remark
-

78. DASHBOARD

Dashboard available to all authorised users.

Unit Summary

- Total Units
- Allocation Pending
- Allocation Approved
- ATS
- Sale Deed
- Direct Sale Deed
- Completed
- Cancelled
- Unit Change

Workflow Summary

- Pending CRM
- Pending CSO
- Pending Management
- Pending Legal Executive
- Pending Legal Manager
- Pending CFO
- Pending Admin
- Pending CRM Executive

Exception Summary

- Financial Exceptions
 - Reopened Workflows
 - Cancellations
 - Unit Changes
 - Customer Changes
 - Management Overrides
 - Legal Manager acting-role cases
-

79. PROJECT-WISE DASHBOARD

Filter by project.

Show:

- Total Units
 - Allocated
 - ATS
 - Sale Deed
 - Direct Sale Deed
 - Completed
 - Pending
 - Cancelled
 - Financial Exceptions
-

80. UNIT-WISE DASHBOARD

Columns:

- Project
 - Unit
 - Customer
 - CRM
 - Workflow Type
 - Current Stage
 - Workflow Responsible
 - Actual Acting User
 - Physical Document Holder
 - Date Entered Stage
 - Days Pending
 - Financial Exception
 - Last Action
 - Next Action
 - Latest Remark
-

81. TRANSACTION CONTROL SHEET

Each transaction must have a digital control-sheet view inspired by the existing manual paper form.

It should show:

Unit Allocation

- Client Confirmation Date

- Onboarding Date
- Source of Booking
- Booked By
- Booking/Reference Remark
- Payment Plan
- Project
- Unit
- Customer
- Sale Deed Value
- CCF
- KYC
- CSO Approval
- Management Approval

ATS

- Management Approval
- Customer Email Approval
- Legal Executive
- Garvi Reference
- Legal Manager
- CFO Ledger Check
- CRM Customer Signature
- Legal Final Verification
- SRO Registration
- Admin Scan
- Sales Close
- Scan Check
- Customer Handover

Sale Deed

- Management Approval
 - Legal
 - CFO
 - Financial Receipt Checklist
 - Loan Cheque
 - Customer Signature
 - Final Verification
 - Execution Date
 - Registration
 - Index II
 - Certified Copy
 - Management Skip Exception
 - Scan
 - Sales Close
 - Scan Check
 - Customer Handover
-

82. CONTROL SHEET STATUS

Every line should show:

- Pending
- Completed
- Sent Back
- Not Applicable
- Skipped — Direct Sale Deed
- Exception

along with:

- Actual user
- Date/time
- Remark where relevant

83. PRINTABLE CONTROL SHEET

Provide:

Print Current Transaction Control Sheet

This should generate a clean PDF containing:

- Unit details
- Customer
- Workflow
- Current status
- Completed stages
- Pending stages
- Financial status
- Key approvals
- Audit summary

This is optional for users but useful for physical files.

84. WORKFLOW TIMELINE

Every transaction has a visual timeline.

Example:

Allocation

↓

CSO

Management Allocation Approval

ATS Management Approval

Customer Email Approval

Legal Executive

Legal Manager

CFO

Customer Signature

Legal Final

SRO

Admin

Scan Check

Customer Handover

ATS Completed

Sale Deed Management Approval

Sale Deed

85. DIRECT SALE DEED TIMELINE

Allocation

CSO

Management Allocation Approval

ATS SKIPPED

Sale Deed Management Approval

Sale Deed Workflow

The timeline must explicitly show:

ATS Not Required – Direct Sale Deed

86. MY TASKS

Every user sees:

- Pending task
 - Project
 - Unit
 - Customer
 - Document
 - Stage
 - Date received
 - Days pending
 - Physical document holder
 - Action required
-

87. PENDING WITH OTHERS

Users such as CRM, CFO and Management can see transactions they are monitoring but which are currently assigned elsewhere.

Example:

A-101 – Sale Deed – Pending with Legal Executive – 3 days

88. SEARCH

Global search:

- Project
 - Unit
 - Customer
 - CRM
 - Booked By
 - Source of Booking
 - Payment Plan
 - Document type
 - SRO
 - Registration Number
 - Current stage
 - Registration date
-

89. REPORTS

Provide:

1. Unit Status Report
 2. Workflow Pending Report
 3. Department Pending Report
 4. User Pending Report
 5. Financial Exception Report
 6. Registration Report
 7. Customer Handover Report
 8. Cancellation Report
 9. Unit Change Report
 10. Customer Change Report
 11. Direct Sale Deed Report
 12. Management Exception Report
 13. Super Admin Financial Change Report
 14. Legal Manager Acting Report
 15. Physical Document Custody Report
 16. Complete Audit Report
 17. Booking Source Report
 18. Booked By Report
 19. Payment Plan Report
-

90. FINANCIAL MANAGEMENT DASHBOARD

Management should see:

- Number of Sale Deeds completed
- Number with financial exceptions
- Total pending unconfirmed amount
- Basic pending
- GST pending
- Maintenance pending
- Maintenance Deposit pending
- Stamp Duty pending
- Legal pending
- PNG pending
- TDS pending

Clicking an amount should drill down to units.

91. LEGAL MANAGER ACTING REPORT

Show:

- Project
- Unit
- Document
- Stage
- Nominal Role
- Actual Performer
- Date/time
- Reason/remark

This is important because Legal Manager is part-time.

92. PHYSICAL DOCUMENT CUSTODY REPORT

Show:

- Project
 - Unit
 - Document
 - Physical Holder
 - Since
 - Days with holder
 - Workflow Stage
-

93. MANAGEMENT EXCEPTION REPORT

Show:

- Direct Sale Deed cases
 - Index II/Certified Copy skips
 - Reopened workflows
 - Super Admin financial changes
 - Customer changes
 - Unit changes
 - Cancellations
 - Financial exceptions
 - Legal Manager acting-role cases
-

94. NO HARD DELETE

Never hard-delete historical:

- Transactions
- Units with history
- Documents
- Approvals
- Audit logs
- Cancelled cases

Use:

- Inactive
 - Cancelled
 - Superseded
 - Archived
-

95. ACCESS CONTROL

CRM

Can create allocations, enter initial data, initiate workflows, perform permitted CRM tasks and permitted Legal Manager functions.

CRM Executive

Handles physical movement, registration data, scan check, handover and permitted Legal Manager functions.

CSO

CSO approval/send back and dashboard.

Management

Management approvals, configured exceptions, dashboard and monitoring.

Legal Executive

Legal preparation, Garvi reference, Index II/Certified Copy confirmation and permitted delegation.

Legal Manager

Legal verification and final verification.

CFO

Ledger verification, financial receipt verification, loan cheque information and permitted Legal Manager functions.

Admin

Scanning, Accounts copy, Sales Close and administrative tasks.

Super Admin

Full administration.

96. WORKFLOW SECURITY

No user can manually jump to future stages.

Workflow engine determines next stage.

Only explicitly configured exceptions can bypass specifically configured requirements.

97. NOTIFICATIONS

Send notification when:

- Task assigned
- Approval required
- Send Back
- Resubmission
- Delegation
- Financial exception
- Super Admin financial change
- Scan completed
- Handover pending
- Management exception
- Workflow reopened
- Cancellation
- Unit change
- Customer change

Channels:

- Email
 - In-app
-

98. EMAIL FAILURE

Email failure must not stop workflow.

Log failure and retry.

In-app notification remains available.

99. GOOGLE DRIVE FAILURE

If mandatory Google Drive storage fails:

- Do not mark scan complete.
 - Show error.
 - Allow retry.
 - Do not silently continue.
-

100. DATA EXPORT

Super Admin can export:

- Unit data
- Transaction data
- Financial data
- Workflow history
- Audit logs
- Reports

Exports can contain Google Drive references rather than downloading all documents.

101. DATA BACKUP

Organisation must retain control over:

- Database
- Google Drive
- Documents
- Exported data

Google Drive should preferably be connected to an organisation-controlled account/environment.

102. NO SLA ESCALATION

Do not build complex SLA escalation in V1.

Daily 10:00 AM comprehensive pendency reporting is sufficient.

The architecture should allow SLA functionality to be added later.

103. OVERALL STATUS MODEL

Do not use one status for everything.

Maintain:

Workflow Status

Where is the document?

Document Status

Are required documents available/scanned/verified?

Financial Compliance

Are all receipts confirmed?

Handover Status

Has customer received document?

Overall Transaction Status

Overall condition.

Example:

Sale Deed: Completed

Documents: Completed

Handover: Completed

Financial Compliance: 2 Pending

Overall: Attention Required

104. TRANSACTION SUMMARY

Every unit should have:

Transaction Summary

containing chronological:

- Allocation
- Approvals
- ATS
- Sale Deed
- Registration
- Financial verification
- Exceptions
- Scanning
- Sales Close
- Handover
- Final status

Exportable as PDF/Excel.

105. DATABASE CORE ENTITIES

Recommended entities:

User

- ID
- Name
- Email
- Role
- Status

Role

- ID
- Name
- Permissions

Project

- ID
- Name
- Code
- RERA
- Status
- BU Date

Unit

- ID
- Project
- Unit Number
- Status

Source Master

- ID
- Source Name
- Type
- Active

Booked By Master

- ID
- Name
- Type
- Active

Payment Plan Master

- ID
- Name
- Description
- Active

Transaction

- ID
- Unit
- Customer
- CRM
- Booking Information
- Direct Sale Deed
- Status

Financial Details

- Transaction
- Basic
- GST
- Maintenance
- Maintenance Deposit
- Stamp Duty
- Legal
- PNG
- TDS

Financial Verification

- Transaction

- Component receipt statuses
- CFO
- Date
- Remarks

Workflow

- Transaction
- Type
- Current Stage
- Current Responsible Role
- Current Responsible User
- Status

Workflow Action

- Workflow
- Action
- User
- Nominal Role
- Actual Role
- From
- To
- Date/time
- Remark

Physical Custody

- Workflow
- Document
- From
- To
- Date/time
- Remark

Document

- Workflow
- Document Type
- Google Drive ID
- Version
- User
- Date

Financial Exception

- Transaction
- Component
- Amount
- Status
- Created
- Resolved
- Resolved By

Delegation

- Original User
- Acting User
- Role
- Start
- End
- Reason

Audit Log

- Entity
- Entity ID
- User
- Action
- Old Value
- New Value
- Timestamp
- IP
- Device
- Remark

Notification

- User
- Workflow
- Type
- Message
- Sent
- Read
- Status

106. WORKFLOW ENGINE

Use a configurable state-machine architecture.

Do not hard-code workflow logic into individual screens.

The engine should understand:

- Current stage
- Required role
- Actual assignee
- Permitted acting roles
- Required fields
- Required documents
- Permitted send-back target
- Next stage
- Exception rules

- Notification rules
-

107. FUTURE EXTENSIBILITY

Architecture should allow future workflows:

- Possession
- Cancellation
- Refund
- Transfer
- Mortgage/NOC
- Amendment
- Customer modification
- Additional agreement
- Post-sale documentation

without rebuilding the application.

108. DEVELOPMENT ORDER

AI coding agent must first produce:

Phase 1

- Database schema
- Entity relationships
- Permission matrix
- Workflow state diagram
- API design
- Google Drive design
- Notification design

Phase 2

- UI wireframes
- Dashboard
- Transaction page
- Workflow page
- My Tasks
- Audit Trail
- Reports

Phase 3

- Authentication
- RBAC
- Workflow engine
- Task assignment

- Notifications
- Audit engine

Phase 4

Implement:

1. Unit Allocation
2. ATS
3. Sale Deed
4. Direct Sale Deed
5. Financial Exceptions
6. Cancellation
7. Unit Change
8. Customer Change
9. Delegation
10. Management Exceptions

Phase 5

- Google Drive
- Email
- Scheduled notifications

Phase 6

- Dashboard
- Reports
- Exports

Phase 7

- Full testing
- Security testing
- Workflow bypass testing
- Audit testing

109. MANDATORY ACCEPTANCE TESTS

The AI coding agent must demonstrate:

Allocation

Cannot submit without CCF.

Cannot submit without KYC checkbox.

Three Management Approvals

Unit allocation approval is independent from ATS approval and Sale Deed approval.

Send Back

Every Send Back requires remark and preserves history.

Direct Sale Deed

ATS skipped and correctly shown as Not Applicable.

ATS

Complete end-to-end ATS workflow.

Sale Deed

Complete end-to-end Sale Deed workflow.

Financial Exception

CFO can approve with pending receipts.

Workflow continues.

Notifications sent.

Financial Closure

Later receipt confirmation closes financial exception.

Super Admin Change

Locked financial amount changes create audit and notify CFO/Management.

Legal Manager Acting

CRM/CFO can perform Legal Manager function.

Audit captures nominal role and actual performer.

Delegation

Delegation correctly transfers task.

Mixed Legal Verification

Different people can perform first/final legal checks while preserving both actions.

Physical Custody

System shows current physical document holder.

Sales Close

Admin cannot complete scan process without required Sales Close Confirmation.

Customer Handover

Workflow cannot close without receiving copy.

Reopen

Only Super Admin can reopen completed workflow.

Cancellation

Cancellation preserves history.

Unit Change

Old unit history preserved.

Customer Change

Original customer history preserved.

110. FINAL SUCCESS CRITERIA

The system is successful when Management can open one dashboard and immediately determine:

For every project and every unit, where is the transaction, what document is currently being processed, which stage it is at, who is responsible, who physically has the document, how long it has been pending, what has been approved, what has been sent back, what financial amounts are pending, whether any exception exists, and what needs to happen next.

The application should eliminate the need to physically chase the paper control sheet.

The physical legal document can continue moving between employees.

The **digital system controls and records the movement.**

No document should become "lost between departments."

No approval should be invisible.

No Send Back should disappear.

No financial exception should disappear merely because the Sale Deed is registered.

No critical financial amount should change without an audit trail.

No completed workflow should be silently altered.

No employee name should be hard-coded into the workflow.

The role belongs to the workflow; the actual logged-in user belongs to the audit trail.
